

Promotional Terms and Conditions of Mobile Account Opening Offer – Up to HKD300 cash reward (the “Mobile Account Opening Offer”)

Important Risk Warning

- Unit Trusts, Bonds, structured products (including Equity Linked Investments, Structured Notes, Deposit Plus, Structured Investment Deposits and Capital Protected Investment Deposits) are investment products. Together with Certificates of Deposit (CDs), they are NOT equivalent to time deposits. Some Unit Trusts and Structured Products may involve derivatives. The investment decision is yours but you should not invest unless the intermediary who sells it to you has explained to you that the product is suitable for you having regard to your financial situation, investment experience and investment objectives.
- Structured Investment Deposits, Deposit Plus, Capital Protected Investment Deposits and CDs are not protected deposits and are not protected by the Deposit Protection Scheme in Hong Kong. Deposit Plus is NOT principal protected.
- The price of products may move up or down and may become valueless. Losses may be incurred as well as profits made as a result of buying and selling the products.
- In the worst case scenario, the value of the products may be worth substantially less than the original amount you invested (and in an extreme case could be worth nothing).
- Issuer’s Risk – Bonds, CDs, structured products are subject to both the actual and perceived measures of credit worthiness of the issuer. There is no assurance of protection against a default by the issuer in respect of the repayment obligations. In the worst case scenario, you might not be able to recover the principal and interest/coupon if the issuer defaults on the Bonds, CDs and Structured Products.
- Investors should not make investment decisions based on this material alone.
- Investment involves risks. Past performance of products is no guide to future performance. For details of the products, the related fees and charges and risk factors, please refer to the individual product materials and/or offering materials.
- Currency conversion risk – the value of your foreign currency and RMB products will be subject to the risk of exchange rate fluctuation. If you choose to convert your foreign currency and RMB products to other currencies at an exchange rate that is less favourable than that exchange rate in which you made your original conversion to foreign currency and RMB, you may suffer loss in principal/investment.
- RMB denominated products are subject to liquidity risk as there may be no regular trading and active secondary market for RMB Income Instruments. The bid and offer spread of the price of RMB Income Instruments may be large, so investors may incur significant trading and realisation costs and may suffer losses accordingly.
- Warrants and CBBCs are non-collateralised products. The price of the Warrants/CBBCs may fall in value as rapidly as it may rise and investors may sustain a total loss of their investment. Prospective investors should ensure that they understand the nature and risks and seek for professional advice where applicable.
- Additional risks are disclosed in the “Risk Disclosure” section. Please refer to “Risk Disclosure” section for details.

15. These Promotional Terms and Conditions are governed by and construed in accordance with the laws of Hong Kong.
16. If there is any discrepancy between the Chinese and English versions of these Promotional Terms and Conditions, the English version shall apply and prevail.

Risk Disclosure

Unit Trusts

- In the worst case scenario, the value of the funds may be worth substantially less than the original amount you invested (and in an extreme case could be worth nothing).
- Funds which are invested in certain markets and companies (e.g. emerging, commodity markets and smaller companies etc.) may also involve a higher degree of risk and are usually more sensitive to price movements.
- Credit Risk/Interest Rate Risk – a fund that invests in fixed income securities may fall in value if interest rates change, and is subject to the credit risk that issuers may not make payments on such securities. The price of the fund may have a high volatility due to investment in financial derivative instruments and may involve a greater degree of risk than conventional securities.
- Counterparty Risk – a fund will be exposed to credit risk on the counterparties with which it trades in relation to financial derivative instrument contracts that are not traded on a recognised exchange. Such instruments are not afforded the same protections as may apply to participants trading financial derivative instruments on organised exchanges, such as the performance guarantee of an exchange clearing house. A fund will be subject to the possibility of insolvency, bankruptcy or default of a counterparty with which a fund trades such instruments, which could result in substantial loss to a fund.

Bonds and Certificates of Deposit (“CDs”)

- Bonds/CDs are mainly medium to long-term fixed income products, not for short-term speculation. You should be prepared to hold your funds in bonds/CDs for the full tenor. You could lose part or all of your principal if you choose to sell your bonds/CDs prior to maturity.
- Indicative prices of bonds/CDs are available and the bonds/CDs price do fluctuate when market changes. Factors affecting the market price of bonds/CDs include, but are not limited to, fluctuations in Interest Rates, Credit Spreads, and Liquidity Premiums. The fluctuation in yield generally have a greater effect on the prices of longer tenor bonds/CDs. There is an inherent risk that losses may be incurred rather than profit made as a result of buying and selling bonds/CDs.
- It is for the issuer to pay interest and repay the principal of bonds/CDs. If the issuer defaults, the holder of the bonds/CDs may not be able to receive the interest and principal. The holder of bonds/CDs bears the credit risk of the issuer and has no recourse to the Bank unless the Bank is the issuer itself.
- If you wish to sell bonds/CDs, HSBC may repurchase them based on the prevailing market price under normal market circumstances, but the selling price may differ from the original buying price due to changes in market conditions.
- There may be exchange rate risks if you choose to convert payments made on the bond/CDs to your home currency.
- The secondary market for bonds/CDs may not provide significant liquidity or may trade at prices based on the prevailing market conditions and may not be in line with the expectations of holders of bonds/CDs.
- If bonds/CDs are redeemed early, you may not be able to enjoy the same rates of return when you use the funds to purchase other products.

Deposit Plus (DPS)

- Deposit Plus is NOT equivalent to, nor should it be treated as a substitute for a time deposit. It is NOT a protected deposit and is NOT protected by the Deposit Protection Scheme in Hong Kong.
- Derivatives risk – Deposit Plus is embedded with FX option(s). Option transactions involve risks, especially when selling an option. Although the premium received from selling an option is fixed, you may sustain a loss well in excess of such premium amount, and your loss could be substantial.
- Limited potential gain – The maximum potential gain is limited to the interest on the deposit.

- Maximum potential loss – Deposit Plus is not principal protected. You must be prepared to incur a loss as a result of depreciation in the value of the currency paid (if the deposit is converted to the linked currency at maturity). Such loss may offset the interest earned on the deposit and may even result in losses in the principal amount of the deposit.
- Not the same as buying the linked currency – Investing in Deposit Plus is not the same as buying the linked currency directly.
- Market risk – The net return of Deposit Plus will depend upon the exchange rate of the deposit currency against the linked currency prevailing at the deposit fixing time on the fixing date. Movements in exchange rates can be unpredictable, sudden and drastic, and affected by complex political and economic factors.
- Liquidity risk – Deposit Plus is designed to be held until maturity. You do not have a right to request early termination of this product before maturity. Under special circumstances, the Bank has the right to accept your early redemption request at its sole discretion and on a case by case basis. The Bank will provide an indication of the redemption price upon such request.
- Credit risk of the Bank – Deposit Plus is not secured by any collateral. When you invest in this product, you will be relying on the Bank's creditworthiness. If the Bank becomes insolvent or defaults on its obligations under this product, you can only claim as an unsecured creditor of the Bank. In the worst case, you could suffer a total loss of your deposit amount.
- Currency risk – If the deposit currency and/or linked currency is not your home currency, and you choose to convert it back to your home currency upon maturity, you may make a gain or loss due to exchange rate fluctuations.
- Risks relating to RMB – You should note that the value of RMB against other foreign currencies fluctuates and will be affected by, amongst other things, the PRC government's control (for example, the PRC government regulates conversion between RMB and foreign currencies), which may adversely affect your return under this product. In case you receive RMB as a Linked Currency at maturity and you choose to convert your maturity proceeds to other currencies, you may suffer loss in principal. This product will be denominated (if the Deposit Currency is RMB) and settled (when you receive RMB at maturity) in RMB deliverable in Hong Kong, which is different from that of RMB deliverables in mainland China.

Renminbi ("RMB") Products

- There may be exchange rate risks if you choose to convert payments made on RMB related products to your home currency.
- RMB products may suffer significant losses in liquidating the underlying investments if such investments do not have an active secondary market and their prices have large bid/offer spreads.
- In general, RMB equity products are exposed to the usual kind of default risks that might be associated with equity products denominated in other currencies.
- RMB debt instruments are subject to interest rate fluctuations, which may adversely affect the return and performance of the RMB products.
- You could lose part or all of your principal if you choose to sell your RMB products prior to maturity.

Securities Trading

- The Bank does not provide investment advice. Investment involves risk. You should carefully consider whether any investment product or service mentioned herein is appropriate for you in view of your investment experience, objectives, financial resources and relevant circumstances. The price of securities may move up or down. Losses may be incurred as well as profits made as a result of buying and selling securities.
